

AWS VPN Client setup

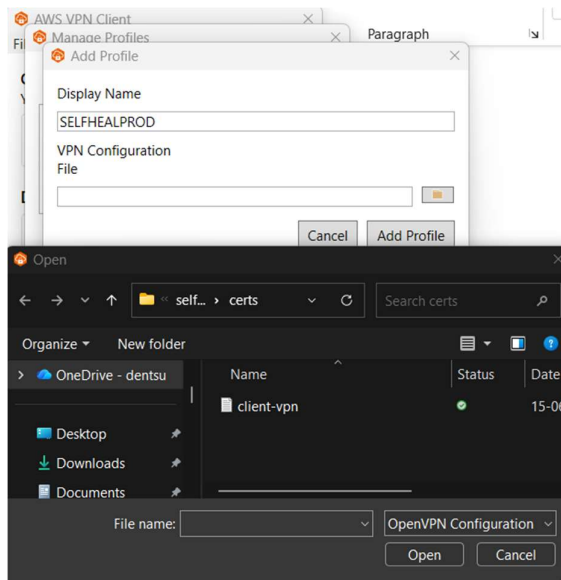

1. Download AWS VPN from the company portal.

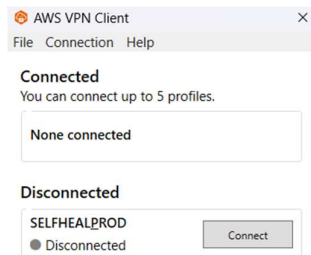

2. Open AWS VPN Client.
3. Click 'File' > 'Manage Profiles' > 'Add Profile'.

4. Give a name to the profile and select the .ovpn config file.

5. Now the profile should be added and visible in the wizard. Then click 'connect'

6. Once connected, go to the SQL server SSMS studio and enter the servername, username and password to connect to the RDS.
